

SADIG AKHUND

Data Engineer

+994 070 318 59 49 • sadigaxund@hotmail.com • [in/sakhund](https://www.linkedin.com/in/sakhund) • Baku, Azerbaijan

Summary

My career began with a passion for Technology, Engineering, and especially Robotics. I once envisioned myself as an “evil-genius” inventor; soldering circuits and building side projects as a hardware engineer. While my BSc in Computer Engineering supported that vision, I found myself increasingly drawn to the world of data. This pivot began with a Google certificate course and evolved into an MSc in Data Science, fueling an ever-growing passion for learning and solving complex problems through data.

Education

ADA University	2017 - 2021
Bachelor of Science, Computer Engineering	
George Washington University & ADA University	2021 - 2023
Master of Science, Computer Science & Data Analytics	

Experience

	KDM Force	Rome, Italy (Remote)
	Data Engineer	06/2022 - 11/2025
Applied Skills: Apache Spark, Kafka, Iceberg, REHL, PostgreSQL, Redis, Dataiku, Microsoft SQL Server		
• Built and deployed end-to-end data ingestion pipelines from scratch using Apache Spark and the Fyrefuse orchestration platform to extract, process, and load OTA data into a Microsoft SQL Server data warehouse for the Ministry of Tourism of Saudi Arabia. • Architected scalable workflows and implemented adaptive error handling to manage unreliable and frequently changing external OTA data providers, minimizing downtime and manual intervention. • Designed and maintained a data warehouse schema supporting over 80 million customer reviews and multi-year listing metadata, including 18 business-critical tables to enable comprehensive national tourism analytics. • Developed and enhanced the backend of Fyrefuse, a data management platform, using Django; implemented new features, optimized performance, and ensured system reliability in collaboration with cross-functional teams. • Integrated Trino, Hive Metastore, and Apache Iceberg with the object store to extend analytical capabilities and improve data processing efficiency. • Achieved sub-second write times for 1M records, significantly improving ingestion speed and downstream query performance. • Managed ETL workflows using Dataiku, including parameter file handling and log auditing to ensure data governance and pipeline transparency.		
	Unibank	Baku, Azerbaijan (Intern)
	Data Engineer	10/2021 - 05/2022
Applied Skills: Python, FastAPI, InfluxDB, MongoDB, Snowflake		
• Researched and evaluated modern storage technologies including InfluxDB, Snowflake, and MongoDB, providing feasibility assessments and performance benchmarks that informed potential integration paths into the company's data stack. • Improved logging structure for middleware handling customer push notifications, reducing log size and optimizing format to enhance processing efficiency and system observability. • Contributed to ongoing backend development with a focus on API performance, system reliability, and data storage optimization, applying tools such as Python, FastAPI, and NoSQL technologies.

Publications & Certifications

Pypelineer

Open-source python framework
04/2024 - Present

Pypelineer enables users to build efficient and structured **ETL pipelines**, leveraging Python's in-memory capabilities to optimize performance for big data applications. It includes prefabricated modules for **Apache Kafka** and API providers like **Apify**, promoting cleaner code and accelerating development. By harnessing Python's **context manager protocol**, Pypelineer ensures reliable resource management and maintainable execution flows. See project on [GitHub](#).

Google Data Analytics Professional Certificate

Certificate issued by Google
04/2022

Completed the **Google Data Analytics Professional Certificate**, showcasing a strong foundation in **data analysis**, **data preparation**, and **R programming**. Developed the ability to clean, analyze, and visualize data effectively to support informed decision-making in professional environments. See credential on [Credly](#).

Predicting Churn: A Comparative Analysis of Machine Learning Models based on Social Media Data

Big Data Research Paper
05/2023

Akhund, Sadig. (2023). Predicting Churn: A Comparative Analysis of Machine Learning Models based on Social Media Data. See paper on [ResearchGate](#).

Skills

- Languages: Python • SQL • Java • C++ • Bash/Shell Scripting • R
- Processing & Orchestration: Spark • Kafka • Flink • Airflow • Kestra • Dataiku • dbt
- Data Stores: PostgreSQL • Microsoft SQL Server • Redis • InfluxDB • MongoDB • Minio • Apache Iceberg
- Data Platforms & Analytics: Google BigQuery • Snowflake • DuckDB • Trino • Data Warehousing • Data Modeling
- Cloud Platforms & DevOps: GCP • Terraform • Docker • Linux/Unix (RHEL)
- BI & Visualization: Google Looker • Apache Superset • Grafana • Metabase
- Tools & Concepts: Git • FastAPI • Django • ETL/ELT • REST APIs • Distributed Systems • Docker • Kubernetes

Languages

English Proficient

Russian Advanced

Turkic (Azerbaijani) Native
